

Chapter 1 Get Started

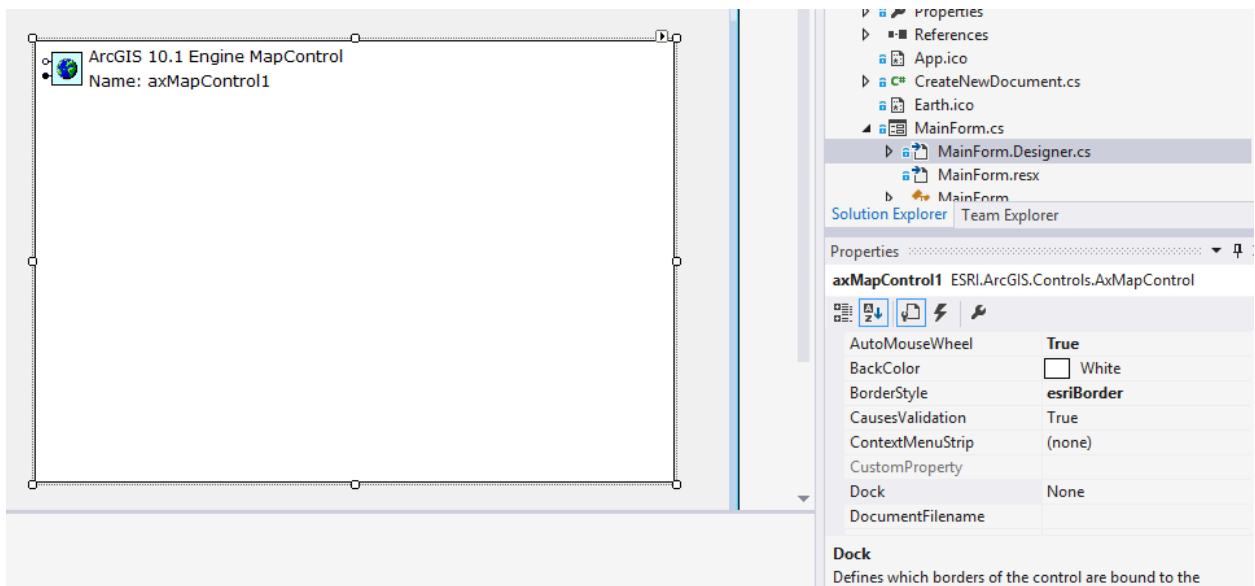

1. Create a new Map Control application project:

- Open Visual Studio, click File -> New -> Project.
- Choose templates: Visual C# -> ArcGIS -> Extending ArcObjects.
- Choose project type: MapControl Application.
- Input the project name and location path, and then click OK.

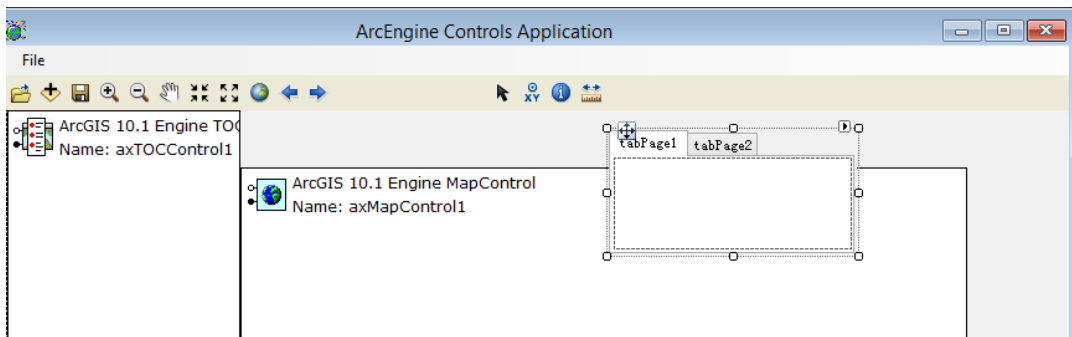

2. Add Layout Control:

- Click MapControl (default name: axMapControl1), in the Properties panel, set Dock to "None", then zoom out MapControl

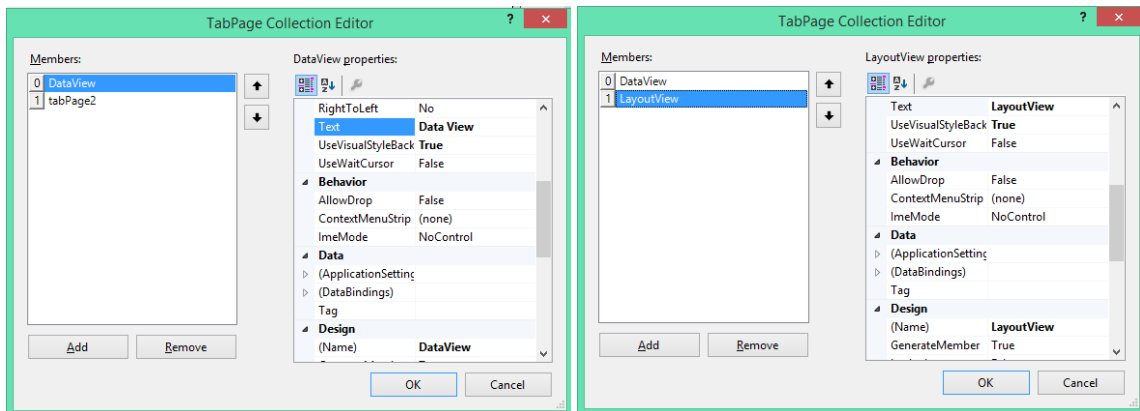

- Choose TabControl from Toolbox, and drag into the application window.

- Drag MapControl into tabPage1 of TabControl, and set Dock property to "Fill"
- Drag PageLayoutControl into tabPage2 of TabControl, and set Dock property to "Fill"

- Edit property "TabPage" of TabControl, as the following graph:

- Set Alignment of TabControl to "Bottom", Dock of TabControl to "Fill".

Now A simple MapControl Application has been built.

Next chapter I will introduce how to synchronize PageLayoutControl and MapControl.
